

D20 Large Deepots

The **Deepot™** systems have been renamed. The D20 trays (formerly D40 trays) and the D50 tray (formerly D16 tray on opposing page) both denote the number of cells per tray. Deepots are used for a wide range of hardwood and other tree seedlings and are available in seven sizes. All are an excellent choice for plant material requiring a deeper root ball. They also allow seedlings to be spread out or consolidated for sorting and maximizing growing density.

Recycled D40 and D16 Cells are manufactured of post industry, pre-consumer recycled polypropylene resin. Color may vary.

Light Weight (L) Recycled (R) Heavy Weight (H)
Some cells are available in white color for use in outside rows.

Large Deepot Cells

* Cell orders of less than 1,000 are welcome.

Tray Covers

The covers shown on opposing page fit over trays filled with cells prior to filling with soil. They prevent soil from working its way into the spaces between individual cells.

Stainless steel is very durable and rust resistant with the highest longevity. It functions the same as our plastic version but with much greater longevity.

The **Boltron** reusable plastic cover is an economical alternative to the stainless steel cover while providing the same great features.

Plastic is the most economical option for a tray cover.

Trays and cells sold separately.

Support Trays allow easier cell consolidation for full utilization of growing space.
