

Single Cell System

The Ray Leach "Cone-tainer"™ Single Cell System consists of individual cells that can be rearranged within each tray. The cells are available in three types of plastic for greater durability and maximum life expectancy: recycled, low density, and low density with UV stabilizers (tinted yellow). All cells have internal vertical anti-spiral ribs and a center bottom drainage hole with three or four side-drain holes on the tapered end. The recycled cells (tinted gray) are manufactured of post industry, pre-consumer recycled polypropylene resin, which results in a slightly more rigid cell.

Cells				Usage		2-3 times		3-5 times		5-7 times

* Cell orders of less than 1,000 are welcome.

TYPE OF PLASTIC

Recycled (R) Cell color may vary

Low Density (L)

UV Stabilized (U)

Trays

These patented trays are made of durable polystyrene and have a life expectancy of eight to ten years. They are partially vented on the surface to provide more air flow between cells, and have locking corners for easy stacking and storage.

FOB Oregon US Patent #3,889,416 Canada #1,009,843

Economy Cells

The Economy Stubby Cell (ESC7) and Economy Super Cell (ESC10) are very flexible and maintain the same dimensions as the RLC7 Stubby Cell and the SC10 Super Cell listed above.
