

D20 Deepots

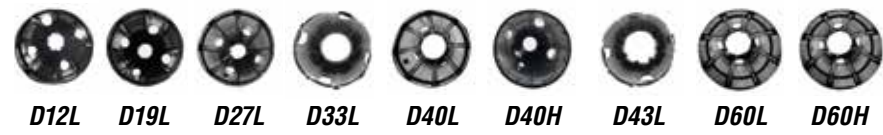

The **Deepot™** D20 and D50 trays each denote the number of cells per tray. Deepots are used for a wide range of native plants, hardwoods and other tree seedlings. All are an excellent choice for plant material requiring a deeper root ball. They also allow seedlings to be spread out or consolidated for sorting and maximizing growing density.

The **Heavy D40 cells** are manufactured of recycled polypropylene resin. Color may vary.
