

HIKO Tray System

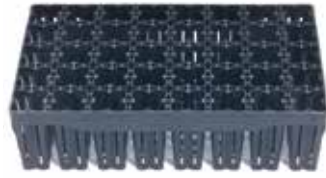

HIKO™ trays are used in forest nurseries worldwide for the production of quality seedlings and cuttings. All HIKO trays are made of high-density plastic and are durable, recyclable and easy to clean. The trays have a lifespan of more than ten years. All tray cavities have vertical root training ribs and/or side slits. Side slits assure good aeration of the roots and create active root tips. The cell design of the HV90AB has side slits and active root guiding along the sides of the root ball.
