

Jiffy Forestry Pellets

Jiffy® Forestry Pellets... The “Original” Air Pruning System, a soft-walled, meshed seedling container that allows “Natural Lateral Root Development.” Since the initiation of the Jiffy container, our forestry pellets are being used around the world for all types of regeneration, with over 100 million pellets used annually and continually growing. This unique container system has incorporated **air pruning** to facilitate the production of lateral roots with **minimal to no root deformation**. The container aids the nursery in producing a **natural lateral root system** so there is immediate lateral root egression after planting to anchor the seedling immediately and maximize field performance potential.

The Jiffy Forestry Pellets utilize a sterile peat media which aids in the control of weeds and root diseases in the greenhouse. The media in the pellet is 100 percent top quality peat which Jiffy grades, screens, tests and analyzes on a consistent basis during manufacturing.

Jiffy Forestry Pellets come in sheets which fit standard nursery 10/20 flats. It is imperative when ordering or using 10/20 flats that the bottom inside dimension is 9.84" x 20.1" (25 cm x 51 cm), otherwise the sheet of pellets may not fit within the tray.
