

# Jiffy Forestry Pellets

**Jiffy® Forestry Pellets** are the “Original” Air Pruning System: a soft-walled, meshed seedling container that allows for natural lateral root development with minimal to no root deformation. Since the initiation of the Jiffy container, forestry pellets have been used around the world for all types of regeneration, with over 100 million pellets used annually. The container aids the nursery in producing a natural lateral root system so there is immediate lateral root egression after planting to anchor the seedling immediately and maximize field performance potential. Jiffy Forestry Pellets are pH-balanced for hardwoods and tree seedlings, and are not recommended for vegetables.

The Jiffy Forestry Pellets utilize a sterile peat media which aids in the control of weeds and root diseases in the greenhouse. The media in the pellet is 100 percent top-quality peat which Jiffy grades, screens, tests and analyzes on a consistent basis during manufacturing.

Jiffy Forestry Pellets come in sheets which fit standard nursery 10/20 flats. It is imperative when ordering or using 10/20 flats that the bottom inside dimension is 9.84 x 20.1", otherwise the sheet of pellets may not fit within the tray.

\* Expanded measurements are approximate. Several other sizes available. Please call for details.

\*\* TPH: With transplant hole for large seed, acorns or transplant pellets.

\*\*\* SRF: Slow release fertilizer added

Order in full case quantities only.

**Jiffy transplant pellets (TPH)** feature an extra large pre-made hole and are used for seeding large seeds or placement of transplants. There are two different indent diameters and depths available: 0.6" and 0.8" diameters; and 1" and 1.6" depths (after pellet expansion).
